

QUICK START OFFERING

Getting your Inspections App up and running is fast—we'll work with you to configure your solution, and in just one day, your inspectors can be using it in the field. Here's what we'll do:

- Gather requirements; understand success criteria
- Provision environment; set up user and assign licenses; create data model
- Configure and deploy a functioning Inspections App using Power Platform
- Conduct a hands-on lab session with key power users to explore the Power Platform and solution
- Evaluate and measure success; identify other challenge areas

Power Platform Inspections Quick Start App for State and Local Governments

Empower your inspectors to efficiently gather data in the field

Governments are under pressure to keep up with the escalating pace of business. With the pandemic, much was put on hold to address more critical needs, and now it's time to catch up, but the landscape has changed. You need tools and technology to help tackle the backlog and address new challenges you've never seen before.

There is a large backlog of needs to address, many of them "priority one", so where do you start? You need to execute as quickly as possible and move on to the next, but that's nearly impossible with traditional software. While those systems can be customized, it's expensive and time-consuming, and lower-cost solutions for specific functions are unreliable, don't integrate, and do one thing only, so you're faced with buying and maintaining multiple apps, keeping data siloed.

Start with Inspections...and Keep Going from There

Inspections are a big responsibility. They keep the community safe while providing a revenue stream—and in a post-pandemic world, they help get the economy going. Businesses are opening back up, and while others have closed, new ones are opening. They all require inspections and other services, but inspectors can't be efficient because they're forced to work with outdated systems or paper forms—which slows them down, creates more work, and increases the chances for error by forcing double data entry.

With **Inspections for State and Local Government**, an app built using the Power Platform, you address the first step in the inspections process—making it easier for inspectors to gather information, upload photos, trigger workflows, and so forth. They get an easy-to-use, mobile-ready app that integrates with other systems (even non-Microsoft), allowing all that information they gather to automatically flow directly into your ERP, case management, fleet management, inventory, or other system of record.

But the benefits don't stop there. You get a low-cost, quick to deploy, easy to maintain app, configured to your specific requirements. Better yet, you get a platform that is ready and able to tackle the next challenge ... and the next ... when you're ready. With the Power Platform, you meet a critical need fast, and you get a platform that future-proofs your operations.
